### Background

HSBC Holdings plc ('HSBC') is assessed as a global systemically important bank ('G-SIB') under the methodology established by the Financial Stability Board and Basel Committee.

In July 2013, the Basel Committee issued final rules on G-SIB assessment, including the requirements for disclosure of the data underlying this process. The table below represents our first disclosure under these rules, as required by the Prudential Regulation Authority ('PRA') in line with the European Banking Authority's ('EBA's) final draft regulatory and implementing technical standards ('RTS', 'ITS') and Guidelines issued on 5 June 2014. These are to implement the Basel rules on G-SIB assessment methodology and disclosure within the European Union under the CRD IV legislation.

### The disclosure

In accordance with the PRA's direction, our disclosure is presented using the format of the template in the EBA's ITS which mirrors, in its structure and the instructions for its completion, the template used for the Basel G-SIB assessment and ranking.

The scope of the requirement for HSBC is a group consolidated basis. The data, which is at 31 December 2013, has been prepared in accordance with our interpretation of the EBA's ITS and Guidelines and the footnotes to the table below. This data, as reported also within the G-SIB assessment process, will be used in determining HSBC's 2014 G-SIB ranking and thereby our actual G-SIB buffer to be applied at the start of its implementation in 2016.

Notes on the basis of preparation:

- The scope of consolidation for the indicators is required to be generally the regulatory basis. For certain items where detailed information for our proportionally consolidated associates is not available, the accounting consolidation has been used.*
- In accordance with the 'Instructions for the end-2013 data collection exercise of the Macprudential Supervision Group', cross-jurisdictional assets and liabilities include local assets/liabilities in local currency of all non-UK offices but exclude balances of associates.*

**The G-SIB assessment methodology**

Under the Basel Committee's G-SIB ranking and capital charge assessment methodology, which the EBA's methodology reflects, a large group of the most systemically important banks as a proxy for the global banking sector is scored under the 12 indicators in sections 2 to 13 above.

The score for each indicator is calculated by dividing a bank's reported value by the aggregate of the values for that indicator reported by the reference group. This amount is then expressed in basis points. For example: if a bank's reported 'Size' indicator made up 3% of the aggregate value reported, its basis point score for this indicator would be 300.

The score in each of the five main categories set out above is then determined as a simple

average of the indicator scores within that category (subject to a cap on the score for Substitutability), and the bank's overall score as a simple average of the five category scores.

It is important to note that a bank's ranking for the purpose of allocation of a capital charge on the scale 0% to 2.5% will therefore be driven by its relative complexity, substitutability, etc. compared with the entire reference group of banks, materially influenced by those of the largest banks in the group.

Thus, if a bank were significantly to shrink its size, simplify operations and reduce complexity, but others were to take even greater steps in this regard, then that bank might nevertheless rise in the overall ranking and potentially incur an increased capital buffer.
